

LONG BEACH HOME VISITATION COLLABORATIVE

OUR PURPOSE: To strengthen and sustain a collaboration of organizations that serve families with young children in Greater Long Beach. Through capacity building and information sharing, we promote the value of Home Visitation services that support families towards resiliency and self-sufficiency.

All new families need help and support to raise a healthy baby, but some families need just a little more than others. Home Visiting is intended for families who need more focused support in caring for themselves and their newborns. Home visitors provide personalized support and information to families during home visits, including:

- Positive parenting
- Child health and development
- Constructive play ideas
- Developmental screenings
- A resource network that links parents/caregivers to other community services

WELCOME BABY

Welcome Baby partners with local Home Visiting Programs within the 14 Best Start Communities. Families living within a Best Start community and identified as needing more focused support are eligible for referral to a local Home Visiting program in their community. Welcome Baby and Home Visiting Programs are designed to assist parents in bonding with their children and supporting all aspects of their child's development.

For more information, please contact your local area participating hospital:
